Democrats took the House, the Senate and 22 governor races in 2026 — with 19 House races still uncalled.

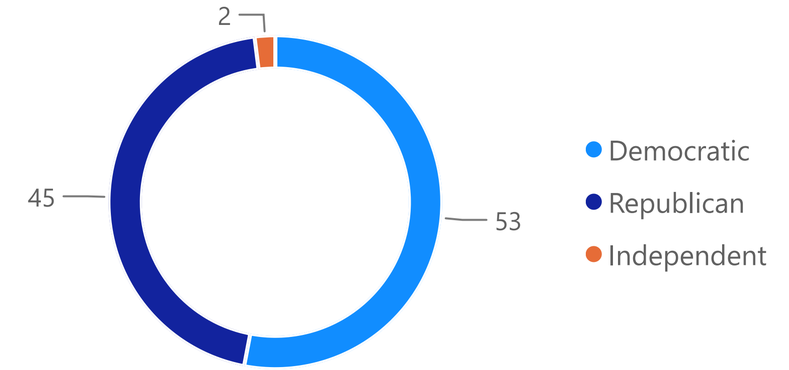

House seats — Democrats (preliminary)	House seats — Republicans (preliminary)	Senate seats — Democrats (preliminary)	Governor races won by Democrats (preliminary)
254	162	53	22

House seats by party, 2026 (preliminary)

Democrats cleared the 218-seat majority with 36 seats to spare; 19 races are still uncalled.

Senate composition, 2026 (preliminary)

The Senate flipped with it: Democrats hold 53 seats to 45, plus 2 Independents.

Seats are the races already called. 19 House races and 2 governor races were still uncalled when this data was collected, so the totals will move slightly. The Senate total adds to 100 because all 100 seats are accounted for.

The 2026 swing reversed 2022: Democrats gained 40 House seats on a 13.1-point popular-vote margin (preliminary).

Net House seats, Democrats 2026 (preliminary)

+40

House popular-vote margin, D minus R, 2026 (preliminary)

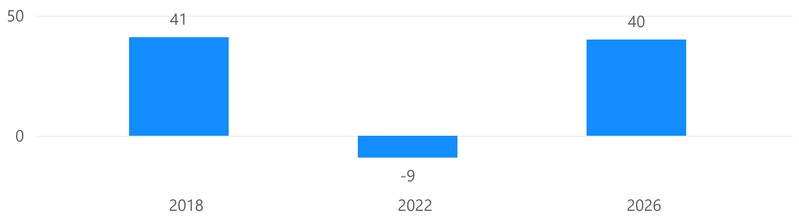

+13.1 pts

Largest Democratic popular-vote share in the 1994–2026 series: 55.8% (preliminary)

Net Senate seats, Democrats 2026 (preliminary)

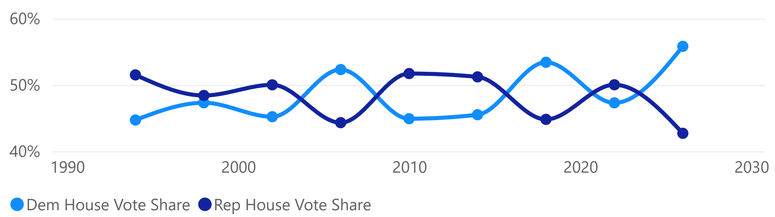

+8

Net House seat change by cycle, 2018 vs 2022 vs 2026

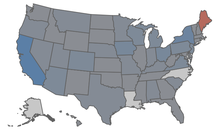

2026 is the mirror image of 2022 — and the second-largest Democratic midterm gain in the series after 2018.

National House popular-vote share by party, 1994–2026 (preliminary for 2026)

The Democratic vote share in 2026 (55.8%) is the highest in the nine-cycle series; 2022 was 47.3%.

Democratic House seats gained or lost by state, 2022 ⟶ 2026 (preliminary)

Gains were concentrated: California +8 and New York +5 account for 13 seats. Maine lost one seat; North Carolina has no 2026 split (see note).

Alaska, Louisiana and North Carolina have no 2026 seat split in the source table, so the measure returns no value for them and the map leaves them unshaded — their 2026 Democratic seats are not counted as zero, and no change is shown. Seat changes partly reflect mid-decade redistricting in California and Texas, not only votes.

Net change compares the seats each party held before the election with the seats it won. The popular-vote share is the share of all votes cast for House candidates nationwide. A big seat gain and a big vote margin usually go together - in 2026 they did.

Texas flipped in 2026: Democrats won the governorship, the Senate seat and the Attorney General's office — after losing the governorship by 11 points in 2022.

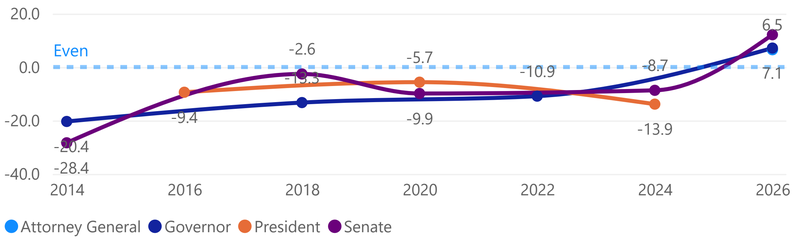

Governor margin 2026, D minus R (preliminary)
+7.1 pts

Senate margin 2026 (preliminary)
+12.1 pts

Attorney General margin 2026 (preliminary)
+6.5 pts

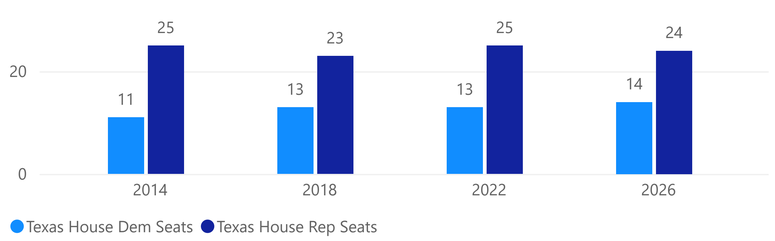

Texas House delegation, Democratic seats 2026 (preliminary)
14

Texas statewide two-party margin, 2014–2026 (preliminary for 2026)

The governor's race narrowed for a decade — R +20.4 in 2014, R +13.3 in 2018, R +10.9 in 2022 — then flipped to D +7.1 in 2026.

Texas House delegation by party

The delegation moved one seat: 13 D / 25 R in 2022 to 14 D / 24 R in 2026 — but Texas redrew its maps before 2026, so this is not a pure vote swing.

Flipped Texas races, 2026

office	dem_candidate	dem_pct	rep_candidate	rep_pct
Attorney General	Nathan Johnson	52.4%	Mayes Middleton	45.9%
Governor	Gina Hinojosa	52.8%	Greg Abbott	45.7%
Senate	James Talarico	55.1%	Ken Paxton	43.0%

The margin is the Democratic candidate's share minus the Republican's, in points. A positive number means the Democrat led. Republicans have held every Texas statewide office since the 1990s — this page shows whether 2026 broke, narrowed or confirmed that pattern, with margins, not adjectives. Note the presidential line moved the other way: Texas voted Republican for president by 13.9 points in 2024.

Turnout, competitiveness and money all moved — but the 2026 turnout figure is not published yet, so that part of the story is still open.

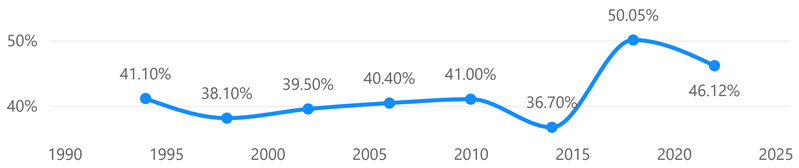

National turnout (VEP), 2022
46.12%

National turnout (VEP), 2026: not yet published

House races decided by under 10 pts, 2022
74

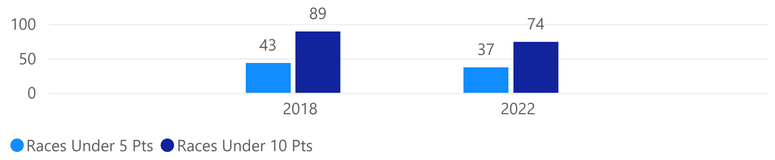

House + Senate candidate receipts, 2026 (preliminary)
$4.20bn

National turnout (VEP) by midterm, 1994–2022

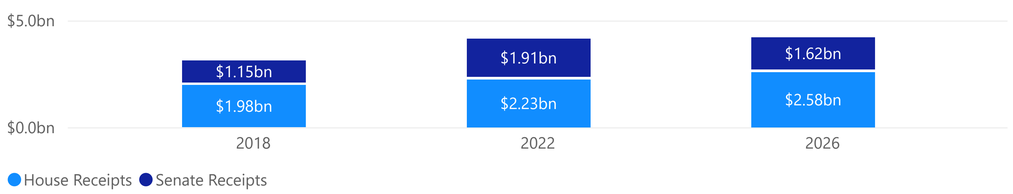

Turnout peaked in 2018 at 50.05% and stayed high in 2022 at 46.12%. Whether 2026 beat them is not yet knowable.

House races decided by under 5 / under 10 points

Close races got rarer: 89 races were decided by under 10 points in 2018, 74 in 2022. No 2026 figures exist yet.

Total candidate receipts by cycle

Money kept rising — $3.1bn in 2018, $4.1bn in 2022, $4.2bn in 2026 — but the 2026 figure is a mid-cycle snapshot (filings to 2026-10-14) and will rise.

VEP turnout counts ballots against the voting-eligible population, not all adults. 'Under 10 points' means the winner's margin was less than 10 percentage points. Receipts are what candidates reported to the FEC; the 2026 file is incomplete because post-election reports had not arrived.

The president's party has lost House seats in 7 of the last 9 midterms. 2026 confirmed the pattern — and was the second-largest loss in the series.

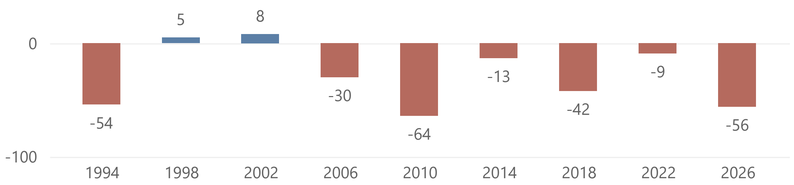

Midterms where the president's party lost seats: 7 of 9 (1994–2026)

Exceptions: 1998 (+5) and 2002 (+8) — the only midterms where the president's party gained seats.

President's-party net House change, 2026 (preliminary)

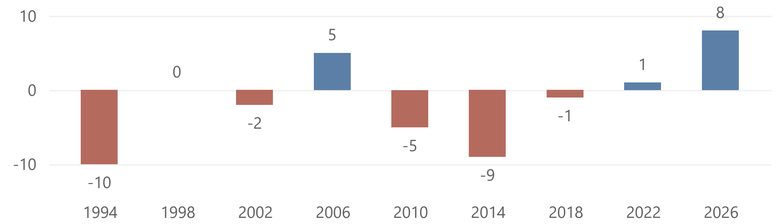

-56

President's-party net House seat change, every midterm 1994–2026 (preliminary for 2026)

Losses range from 9 seats (2022) to 64 (2010). 2026's loss of 56 is the second-largest.

Senate net change (Democratic), by midterm

The Senate does not follow the same pattern — it moved by small amounts in most midterms, then +8 for Democrats in 2026 (preliminary).

Change in chamber composition between Congresses, not the election-night flip count — see the data dictionary note on fact_senate_composition (2006: +5 not +6; 2018: −1 not −2).

Each bar is one midterm. A negative bar means the president's party ended the election with fewer House seats than it had before it. The pattern is a description of nine elections, not a law — two of the nine broke it.

Democrats control the House and the Senate in 2026, but not the presidency — so there is no trifecta (preliminary).

House majority, 2026 (preliminary)

Democratic

Senate majority, 2026 (preliminary)

2026	Republican	Democratic	Democratic	False
2022	Democratic	Republican	Republican	False
2018	Republican	Democratic	Republican	False
2014	Democratic	Republican	Republican	False
2010	Democratic	Republican	Democratic	False

States where the governor and the House delegation went to different parties, 2026

state	governor party	House delegation majority
Georgia	Democratic	Republican
New Hampshire	Republican	Democratic
Texas	Democratic	Republican
Vermont	Republican	Democratic

Flipped Senate seats, 2026 (preliminary)

state	winner	winner_party	incumbent	incumbent_party
Iowa	Josh Turek	Democratic	Joni Ernst	Republican
Kansas	Adam Hamilton	Democratic	Roger Marshall	Republican
Maine	Troy Jackson	Democratic	Susan Collins	Republican
North Carolina	Roy Cooper	Democratic	Thom Tillis	Republican
South Carolina	Annie Andrews	Democratic	Darline Graham[ab]	Republican
Texas	James Talarico	Democratic	John Cornyn	Republican

A seventh seat flipped Republican to Democratic in the composition table but is not named on the source page — see docs/findings.md.

Four states split their ticket in 2026, down from seven in 2022.

Control of the House and Senate has split in most midterms; 2026 gives Democrats both chambers.

Control means which party holds the majority of seats. A trifecta is one party holding the House, the Senate and the presidency at the same time. The flips table names the six Senate seats the results page identifies; the seventh is counted in the composition but not named.
